

Stats
Extra Credit Opportunity!

Find some type of data or statistics from the media that is interesting and/or interpreted wrong. Identify the W's and write a brief summary about the data. The type of summary you write will depend on the type of information you found. Include in your summary why it is interesting to you or describe what is inaccurate.

You are allowed to turn in 2 different summaries (with the article or link to the video) per semester. Each assignment will be worth up to 5 points and categorized as a test. The interesting and/or wrong data set may only be turned once...so it is first come first serve! There is so much interesting and/or wrong data out there, that I am sure you can find some.

If you do not receive the full 5 points, I will provide you feedback once to fix/add things to your summary so that you can get the full 5 points.
