

## MDAS Practice

Solve each problem by showing your steps.

$$-2(3) + 4 \div 2$$

$$5 - 3 \cdot 2 + (-4)$$

$$4 \div (-2)(3) - 5 - (-3)$$

$$-\frac{10}{2} + (-3) - (-4)$$

$$3 + (-2)(6) \div 3 - (2)$$

$$-\frac{4}{-2}(-3) - 2(5)$$

$$5(-2) - \frac{8}{-2} + 5(3)$$

$$2(-4)(3) - \frac{15}{3}(-2)$$

## MDAS & Substitution Practice

Evaluate each expression, given that  $a = 2$ ,  $b = -1$ ,  $c = -4$

$$2a - 3b$$

$$4c \div a - b$$

$$abc - 2b$$

$$\frac{a}{b} - 2c$$

$$b \cdot \frac{c}{a} - bc$$

$$b - ac - 4c + 2b$$
