## Geometry <br> Section 6.4 Practice

$\overline{D E}$ is the midsegment of $\triangle A B C$. Solve for $x$.

Points $A, B$, and $C$ are midpoints of the sides for $\triangle$ QRS. Use the diagram below to determine the missing values.
4. If $\mathrm{AB}=16, \mathrm{QS}=$ $\qquad$
5. If SR $=68, \mathrm{CA}=$ $\qquad$
6. $\quad$ If $\mathrm{SR}=46, \mathrm{BR}=$ $\qquad$
7. If $\mathrm{CA}=3 x-1$ and $\mathrm{SR}=5 x+4$, solve for $x$.

8. If $\mathrm{QR}=5 x+2$ and $\mathrm{CB}=2 x+5$, solve for $x$ AND find AR
9. In the diagram below, $\overline{D E}$ is a midsegment for $\triangle \mathrm{ABC}$, and $\overline{F G}$ is a midsegment of $\triangle \mathrm{ADE}$. Find FG

10. Determine the perimeter of $\triangle \mathrm{DEF}$.

11. If $\mathrm{LU}=2(x-5)$ and $\mathrm{VW}=8-x$, solve for $x$.

12. If $\mathrm{UV}=2 y+14$ and $\mathrm{MN}=13-y$, what is WN ?
