

## SECTION 7.5: PROPERTIES OF TRAPEZOIDS AND KITES

### Learning Targets:

- 7g. Understanding of how to find side and angle measures for trapezoids and kites.
- 7h. Understanding of how to write and solve equations for angles and sides of trapezoids and kites.

### Trapezoid

A quadrilateral with exactly one pair of \_\_\_\_\_

### Isosceles Trapezoid

A trapezoid with \_\_\_\_\_ legs

#### Rules

1. Base angles are \_\_\_\_\_
2. Diagonals are \_\_\_\_\_

Examples: Find the missing angles

Examples: Determine if the trapezoid is isosceles.

a.  $O(0, 0)$   $R(0, 3)$   $S(2, 4)$   $T(4, 2)$

b.  $A(-2, -1)$   $B(0, 3)$   $C(3, 2)$   $D(4, -3)$

### Midsegment of a Trapezoid

A midsegment of a trapezoid is made by connecting the \_\_\_\_\_ of the legs.

The length of the midsegment is \_\_\_\_\_ the \_\_\_\_\_ of the bases.

Examples: Solve for  $x$ .

Examples: Find the length of the midsegment.

- a.  $P(-3, -1)$   $Q(-1, 3)$   $R(5, -3)$   $S(-1, -3)$

## Kites

A quadrilateral with 2 pairs of consecutive \_\_\_\_\_ are \_\_\_\_\_

### Rules

1. Diagonals are \_\_\_\_\_
2. 1 pair of opposite angles are \_\_\_\_\_

Examples: Find the missing angles

- a.
